Site is a group of structures, Centralized, large, low, square & flat, but with both tall & rounded structures present. Structures have a isolated & "surrounded" sense to them. They ~~seem~~ have an organizational, almost governmental connection. Steam, power, & electricity are ~~not~~ involved, & the site is manned by people who are experiencing a sense of nervous anticipation concerning around completion/culmination ^{process} or experiment. Aspects of an important/dangerous ^{relates activity} biochemical/chemical; new technology; and/or nuclear seem to be involved with site. An organic dust, small & very prevalent.
